Log Collection

Automatic collection, compression and upload

One-Click Installation

Common O&M tools and drivers

System Maintenance

Server system configuration and maintenance

Hardware Testing

Standardized performance and stress testing

Disk Inspection

SMART health detection and automatic repair

Core Advantages

One-Stop Management

Integrates mainstream O&M tools into a unified portal. All server management tasks can be completed on one platform without complex Linux commands, reducing learning and operational costs.

Interactive Operation

Features a menu-based visual interface with clear workflows, real-time guidance and result feedback. Beginners can easily finish server configuration and inspection with zero threshold.

Automated Scripts

Built-in automation engine executes system checks, batch configuration, software installation and other tasks automatically. It cuts manual work, boosts O&M efficiency and reduces human errors.

Detailed Reports

Automatically generates standard inspection reports and logs, recording system status, operation records and hardware metrics to support troubleshooting and performance optimization.

Hardware Compatibility

Supports mainstream server hardware such as LSI RAID cards, NVIDIA GPUs and IPMI interfaces. Compatible with multi-brand physical and virtual machines of various architectures.
